

November 27, 1943.

Dr. H. H. Lane,
Department of Zoology,
University of Kansas.

Dear Dr. Lane:

Mr. I. E. Caven, of 123 E. Beloit Street, Salina, found a hardened toad. He says it is not a petrified toad but it is hardened and he kept it three months in formaldehyde then poured it off. The toad is perfect in shape and structure and the skinn is like a turtle shell.

Mr. Caven is in the mail service, and he dug this up in his garden, I believe. He states if you are interested if you will write him he will be glad to send it to you.

Sincerely yours,

Director of Physical Education,
Varsity Basketball Coach.
