

I thoroughly endorse the R. O. T. C. It performs a useful public service. It has many benefits for the individual who enrolls in it. By placing emphasis upon such qualities as capacity to analyze and ability to execute, the R. O. T. C. aids in developing traits of great importance in civil life.

FRANK T. STOCKTON, *Dean,*
School of Business.

FRIENDLY SUGGESTIONS

Consult the University Bulletin on "GENERAL INFORMATION" and "ANNOUNCEMENT OF COURSES". Read all remarks under "MILITARY SCIENCE AND TACTICS" and "RESERVE OFFICERS TRAINING CORPS". Before enrollment consult the published bulletin "SCHEDULE OF CLASSES" under "MILITARY SCIENCE AND TACTICS" for hours for R. O. T. C. instruction.

BE SURE TO ENROLL IN THE R.O.T.C. AT THE SAME TIME AS YOU FIRST ENROLL AT THE UNIVERSITY. The course is for four years and you cannot combine the first two year's work. If in difficulty as to your schedule, consult the officers in uniform present in the rooms where you enroll. In case you have had previous R.O.T.C. training, consult the R.O.T.C. office as to credits to be allowed for this training.

The R. O. T. C. office and class rooms are centrally located in Fowler Shops. Inquiry is always welcomed.

AFTER GRADUATION

Upon being commissioned a Second Lieutenant in the Officers Reserve Corps, an officer is assigned to a Reserve Unit in or near his place of residence. He may, with his consent, attend a two weeks training camp each summer. Other voluntary active service with regular army units, maneuvers, Civilian Conservation Corps, service schools and the General Staff School are open as the Reserve Officer becomes better qualified and trained. During all periods of active duty he receives the usual pay and allowances for his grade. Promotion in the Reserves is on a systematic basis. Throughout the country our 100,000 reserve officers form an active and important group in community life.

The R.O.T.C. imparts knowledge, not only in the field of military science, but also in the field of history and other social sciences. It exercises the intellect, the ability to apply the knowledge gained. Most important of all it seeks constantly to develop leadership and to build character, particularly those basic qualities of honesty, loyalty and physical and moral courage.

To my mind the R.O.T.C. is doing more than developing potential leaders, should the need of their services in defense of our country ever arise. It is building better and finer men and citizens who will be the leaders in many fields in the years to come.

HARRY H. WOODRING

In the unstable world of today problems of national defense loom large among our country's problems. The R.O.T.C. is one means of preparedness. The unit at the University of Kansas is voluntary, and provides training for military leadership as a part of the University's service to state and nation.

DEANE W. MALOTT, *Chancellor*

Information Concerning The Reserve Officer's Training Corps

Division of Military Science and Tactics
University of Kansas

An institution worthy of the name of a "University" should attempt to give its students an understanding of the whole of life. It should ignore no point of view, nor be uninterested in any personal or national need. Through its Department of Military Science, therefore, the University of Kansas offers, on a voluntary basis, a fine course of instruction to all who are interested in Military Science and to those who wish to be specially trained for the national defense. Many College students bear witness to the values received in this course.

PAUL B. LAWSON, *Dean,*
College of Liberal Arts and Sciences.
