

Comments - cont.

Part II. (7) The molded type ball is satisfactory, if the same type gauges are used, but in several instances this year we have used opponents gauges, and on checking the ball with our gauge we found 11 lbs. on one, 9 lbs. on another, $8\frac{1}{2}$ lbs. on another. In each of these games our offensive and defensive rebounding was definitely poor, which makes me feel that the molded ball is more sensitive to inflation than the regular type ball, and when over or under inflated the action of the ball is quite different.

(W.A. Herington, Culver-Stockton College,
Canton, Mo.)

"I would like to see the suggestion of Rube Hoy put into effect or be seriously considered; that is, remove the clause in the rules limiting a player to 4 fouls. I have seen too many cases where a man has three fouls and an opponent deliberately picks on him and shoves him around causing a double foul to be called, or rather, resulting in a double foul being called, removing the boy with 3 fouls. There are many other good arguments which have probably been called to your attention already." (L.C. Dean, Mt. Vernon, Ia.)

Part I. (6) No, bothers going from one to other.

Part II. (7)(a) Slick cover.

"There is so much talk about the present game being too fast for the players health. Some people feel that the elimination of the center jump forces a fast rushing game. Since it is obvious that the rule does not force fast play - but that some coaches encourage back court guarding and hence a faster game - prohibit back court guarding. Then the 10 second rule would mean something and the game would slow down considerably." (Richard Godlove, Ottawa University, Ottawa, Ks.)
