

2. For the school year 1932-1933 the full-time or special teacher of physical and health education must have a minimum of eighteen semester hours college credit in this field; for the school year 1934-1935 the full-time or special teacher must have twenty-four semester hours college credit; and beginning with the school year 1935-1936 the full-time or special teacher must have thirty semester hours college credit in physical and health education. (City supervisors must meet the same requirements each year as are required of the full-time teacher). Of this total, at least twelve semester hours should be in activity and the technique of teaching, six semester hours in the major sports, six semester hours in health education, and six semester hours in the principles and administration of physical and health education.

A person who coaches the major sports and teaches other physical education activities as a full-time load will be classed as a full-time teacher of physical education. A person who has no other teaching duties than that of coaching the major sports will be classed as a part-time teacher of physical education and must have the required number of semester hours training in physical and health education. Athletic coaches are considered as teachers of physical education and must comply with the part-time or full-time requirements in regard to training. A person who coaches athletics and teaches in the academic field will be classed as a part-time teacher of physical education, provided he does not teach also other classes in physical education, in which case he must meet the requirements for a full-time teacher of physical and health education.

In all cases the boys must be taught by a man and the girls must be taught by a woman. The requirements as to the number of semester hours training apply to both men and women.

STANDARD III. Equipment, Facilities, and Supplies.

1. Each school must have either a gymnasium or some suitable indoor playroom. (This standard may be temporarily waived at the discretion of the State Director under conditions which are impossible to remedy in a reasonable length of time). A gymnasium or indoor playroom is considered necessary in order that: (1) the whole program may be centralized; (2) the physical education classes may be conducted without interruption during inclement weather and the health of both the pupils and the teacher may be properly protected; (3) elements of a good physical education program that cannot be offered outdoors may be given the pupils, thus allowing a much broader and richer program to be offered.
2. Sufficient lockers and locker room space must be provided for the safe-keeping of gymnasium suits, clothing, towels, and to provide sanitary and adequate dressing space for the largest classes or groups. It is generally agreed that the total for the above, including shower space, should be at least ten square feet per person for boys and slightly more than that amount for girls. Sufficient space and wire baskets for each pupil will be satisfactory as lockers and locker space. Until the present economic crisis passes and our program gets under way, it will be necessary to judge each school on an individual basis to determine if minimum provisions are being made.
