

7- The words "at least" have been inserted to make clear to the student that he may elect more than twenty hours toward his academic minor.

8- We would be decidedly in favor of the Bachelor of Science in Education. We feel that the proposed program would be sufficiently broad to warrant such a degree.

9- Relative to the proper supervision for practice teachers, as you have intimated, this problem seems a remote one.

10- To conform to the prerequisite for Educational Psychology, we have changed the requirement in General Psychology to five hours.

11- We feel that the program submitted herewith would much better meet the needs of teachers in Physical Education and Athletic Coaches than the outline submitted previously.

12- We would favor having the candidates for the Physical Education major enroll in the School of Education from the moment of their entrance into the University. This is the method which is employed at Nebraska and if the objections can be overcome, it seems that it would be the most satisfactory arrangement for us. Should this proposal be impossible, it would seem that the suggestion of having Physical Education majors enroll directly under a pre- Education advisor, could be made into a workable plan.

As to your question regarding Health and Healthful Living, the course suggested for the first year now changed to Personal Health and the course School Hygiene should furnish those elements.

I am sure that this general arrangement will be acceptable to Miss Hoover, but she is out of the city and I would want her suggestions regarding specific suggestions for the changes in the curriculum for women. I shall submit that phase of our report as soon as she returns.

I shall await with interest the outcome of your conferences regarding the method of administering such a proposed course.

Sincerely yours,

FCA: IW

Director.
