

A General Statement About the Summer Programs

The academic work to be offered during the summer of 1943 is more extensive than that of previous summers, owing to the military needs of the day. For the first time a regular summer semester (May 22—September 11) has been planned, allowing those in the armed forces, and others on an accelerated schedule, to continue with their studies on a twelve-months-a-year basis. The School of Engineering and Architecture, however, will not start its summer semester until July 1, as the result of the assignment at that date of a group of naval Engineering students who will hereafter form an important part of the student body of the school; but for V-1 and V-7 students, and Engineering students with deficiencies to make up, as well as for entering students in Engineering who are deficient in mathematics or who wish to get an early start on their work, a special five-weeks' interim program (May 22—June 26) has been provided.

As during previous summers, there is to be a regular Summer Session (eight weeks in length), designed especially to serve the needs of teachers in the public schools who may wish to continue their training, and those of other classes of graduate students. Work is also offered for students in the College of Liberal Arts and Sciences and in the School of Fine Arts—particularly for beginning students in these two divisions who desire to earn some credits before the fall semester but who cannot attend the entire summer semester.

Several short independent courses have been organized for particular classes of students who, for one reason or another, cannot do needed work in courses otherwise offered.

Questions about the summer programs which are not answered in the pages which follow should be addressed to the Registrar of the University, Dr. Laurence C. Woodruff, or to the dean of the school concerned.
