

of the data gathered.

The players have been listed (see Table V, Evaluation Point Totals) by the number of minutes played during the home games. By a brief study of this table one can see that there is a high relationship between minutes played and the total number of evaluation points. The next column should have more meaning in that points are considered in relationship to the total number of minutes played. The column on playing efficiency was arrived at by the formula given in the definition of terms (No. 6). This rating is probably the most meaningful in the table, but it does not tell the complete story.

Ball handling is the basis for offensive ability, and for this reason a ball handling table has been tabulated (see Table VI).
