CONVERSE-DUNKEL

BASKETBALL SUMMARY

Produced by DICK DUNKEL

Final Ratings for the 1943-1944 Basketball Season

EXPLANATION Dick Dunkel's ratings are based on the cumulative correlation of scoring differential with rating of opposition, and they have been continuous since the 1935 season. They show the potential scoring differences between any two teams. Thus, a 45.0 team should defeat a 35.0 team by 10 points, if they were to meet on a neutral court and play strictly according to past performance. However, research in over 30,000 games has determined that the average team is 4.0 points better on its home court than when visiting. The standings show neutral ratings only. The ratings have been 79.5% accurate in forecasting winners since 1935.
