

REMEMBER that DOLCIN is non-toxic and that even when taken in large quantities there are no ill-effects on the heart or other organs.

IMPORTANT—where pains in children and adolescents are accompanied by fever, consult your physician. DOLCIN is effective in such conditions but such cases should be under a doctor's care.

While DOLCIN is neither laxative nor constipating we recommend to all sufferers: every morning, first thing on rising, SIP a whole tumbler full of very hot water . . . and continue to drink plenty of water during the day. Adequate amounts of water during the day help in improving elimination of poisons which are normally formed by various chemical processes in the body.

INFORMATION & DIRECTIONS

DOLCIN is designed to help relieve pain and discomfort of Arthritis, Rheumatism and rheumatic forms of Sciatica, Neuritis, Lumbago and Bursitis.

DOLCIN is a product which ordinarily brings **PROMPT RELIEF** from pain . . . and, when used according to directions, in a large proportion of cases brings **RELIEF FROM STIFFNESS** together with **RELIEF FROM PAIN**. In cases of Rheumatoid Arthritis, which happily constitute a relatively-small proportion of all arthritic cases, pain is ordinarily relieved but stiffness may not entirely disappear . . . or if it does it will be after prolonged administration.
